50 listings. A smaller call queue.

Syncranicity | Founder call plan | 26 September 2026

Verdict: CALL SPRINT / HOLD FOR EVIDENCE. No paid option is recommended yet. The accompanying workbook contains all 50 listings, asking prices, dates, published parcel identifiers, broker contacts, unresolved gates and an exclusion audit.

50 distinct listings across 20 states; 22 asking prices below $1 million. Thirty-three ads carry dates within 30 days, including a new five-acre ad for an older/undated parent opportunity. These are not 50 verified developable sites, and this was not a scrape of the entire US market.

The first calls

ID / linked property	Ask / gross acres	Published broker contact
1. Foreman Bundy Road, Elizabeth City, NC	$400,000 / 20 ac	Grace Anlauf, Ocean Pearl | 252-619-2564
2. 96 Clayton Drive, Lot 8, Bremen, GA	$800,000 / 15.73 ac	Rettro Group, Century 21 Novus | 678-699-4505
3. 3320 Perry Park Road, Perry Township, OH	$650,000 / 28.296 ac	Rick Osborne / Celeste Osborne, KW Greater Cleveland Northeast | 440-255-5500
4. 6205/6601 S Post Road, Oklahoma City - parent tract, OK	$2,500,000 / 30.89 ac	Karen King, KING Real Estate Group | 405-834-1057
5. Highway A / 15.7-acre tract, Washington, MO	$825,000 / 15.7 ac	Coldwell Banker Premier | 314-647-0001
6. 1180 Lewis Street, Jackson, MI	$159,900 / 14.77 ac	George Copp, ERA Reardon | 517-474-2372
7. 5201 Reichhold Road, Tuscaloosa, AL	$270,000 / 8.1 ac	RightSpace | 205-752-7900
8. Wrangler / Highway 9, Seminole, OK	$1,225,000 / 18.8 ac	Pam Robinson, Pam Robinson Real Estate | 405-382-7653
9. Branch Road, Medina, OH	$599,000 / 8 ac	Douglas Shelton, KW Elevate | 330-888-3542
10. 200 Ferris / 37 Belt Line / 219 & 241 S Dallas, Wilmer, TX	$1,800,000 / 10.218 ac	Kimberly Jansonius, RE/MAX Arbors | 972-872-3355

Call-order judgment, not a success score. Industrial-use evidence, price, manageable size, market access and a cheap next test drive the order. The Jackson, Michigan price is attractive only if environmental and demolition liabilities are manageable. None has utility-confirmed 20-30 MW.

Freshness trap: Perry has a September relisting but older marketing. Oklahoma City advertises five acres at $449,000; the $2.5 million above is the full 30.89-acre parent described in that ad. Do not price a hypothetical carve-out by extrapolation.

Move quickly on answers, not deposits.

The reason for the call

"I am with Syncranicity. I am evaluating your property for a possible 20-30 MW computing development, subject to power, zoning and buyer requirements. I have reviewed the public listing. Before we spend on diligence, is it still available, is there an offer deadline, and would the seller permit a short access and utility-data authorization period? I do not yet have a committed developer."

Ask for the facts that are not already public

1. Status and urgency Any signed contract, accepted offer, deadline, pending counteroffer or unlisted seller constraint? If the agent says "lots of interest," ask whether an actual offer deadline exists.

2. Seller control preferences Would the owner consider no-fee preliminary access/data authorization, short exclusivity, and later an expressly assignable option if feasibility supports it? No agreement is assumed.

3. Exact sale package Which APNs and improvements convey? Any retained buildings, tenants, unwritten occupancy, seller-known easements, disputes or planned exclusions not in the advertisement?

4. Existing private diligence Any survey, Phase I, geotech, wetlands, utility correspondence or failed prior-buyer study already in the seller file? Ask whether reliance/transfer is permitted; do not assume any exists.

5. Utility authorization Obtain the electric provider from a bill or service record, any existing account/load details the seller can share, and permission for a parcel-specific utility inquiry. No credentials or unrelated account information needed.

Voicemail

"I am calling about [property] for Syncranicity. I have a few questions about current availability and whether the owner would allow preliminary utility diligence before discussing site control. Please call me at [your number]."

Capture this, verbatim where possible

Call time and agent name | available/pending | actual offer deadline | exact APNs | price/package changes | seller access/assignment position | utility name and introduction | existing private reports | next owner/date | permission to circulate information.

Success: confirmed availability, exact identity and seller-authorized utility route. **Partial success:** missing items with an owner/date. **Stop:** unavailable, prohibited use, unworkable pad/access, incompatible utility timing/cost, or seller requires material cash before basic answers.

What an actual deal must prove

The buyer card is still a hypothesis

20-30 MW inference-oriented facility; IT versus total facility load, latency destinations, energization deadline and sponsor are not buyer-validated. Prefer smaller, lower-basis industrial sites. Larger and higher-price exceptions are labeled.

A nearby population center is only a demand proxy. An inference buyer must identify latency destinations, measured carrier routes, redundancy, cooling approach, first-phase ramp and occupancy date. Cheap land far from those requirements is not a bargain for that buyer.

Three separate tests - no invented percentages

Test	Required evidence before calling odds high
Technical feasibility	Parcel-specific utility delivery path, timing, upgrade budget and tariff/credit terms; permitted use; net buildable pad; credible carrier design.
Commercial takeout	A named developer whose requirement fits, documented willingness to review the evidence, and a supportable price/fee discussion.
Transaction / profit	Seller-approved assignability, adequate term/extensions, transferable reliance rights, counsel/title review, and net economics after all costs.

Assignment probability: not yet estimable for all 50. A broker calling a property industrial, a substation on a map, or another listing going pending does not supply those missing probabilities. No evidence here supports a high-confidence profit claim.

Illustrative control ladder - not an executed offer or legal form

Ask for limited access and data authorization first. If the seller is willing, have local counsel define scope, insurance, indemnity and any short exclusivity. Intrusive testing needs express permission. Access alone does not reserve the site or create an assignable purchase right.

Only after early power, land-use and buyer fit survive: negotiate an assignable option or conditional purchase agreement covering exact parcels, fixed price/formula, term/extensions, fees and credits, testing/agency authority, seller cooperation, title cure, assignment/nomination, closing conditions and termination rights. Seller acceptance and state-law compliance remain unverified.

Economic test: net assignment profit = assignment consideration received - option/extension fees - legal/title/diligence/utility costs - applicable broker, transaction and other costs. There is no evidence-backed assignment fee or profit forecast for these leads.

Capital discipline: no spend authorized by this scan. Preserve the project limits: $5,000 learning cap and $10,000 all-in per live paid parcel, one paid position at a time. Those are ceilings, not approvals or budgets to spend automatically. A utility deposit can itself make a lead unsuitable for the first pilot.

Routing, exclusions and evidence limits

Verified public contact routes for first calls

Elizabeth City-area lead: Pasquotank Planning: Shelley Cox, 252-338-1144, coxs@co.pasquotank.nc.us. Confirm county versus city jurisdiction. Official source

Bremen-area lead: Haralson Zoning & Permits: 770-646-2033, hcpermits@haralsoncountyga.gov. Confirm whether county or municipal staff controls this parcel. Official source

Perry Township lead: Lake County Perry Township: Pat Freeman, 440-259-5140, zoning@perrytownship-lake.com. Official source

Seminole utility routing: OG&E economic development: Jim Eldridge, 405-553-3345. The listing names OG&E; the utility must confirm parcel applicability. Official source

What the screen removed

Wakeman OH, Hopkinsville KY and Weatherford TX were excluded for pending status. Hensley AR was inactive. Maquoketa IA and San Marcos TX raised prior-list duplication. Harrison AR was residential despite an industrial-park label. A separate Mount Sterling ad showed $200,000 per acre, not total.

Read dates and statuses correctly

All online facts were retrieved for this 26 September run, but indexed pages can lag the market. "Active" means the retrieved advertisement represented availability, not that the seller confirmed it by phone. Dates are the earliest dated marketing evidence retrieved in this screen, not certified first-ever listing dates. Known relistings/feed resets are flagged; no selling-speed prediction is claimed.

Coverage and missing evidence

Sourcing included ordinary industrial land, former factories, fleet yards, commercial tracts and subdividable land, not only ads containing "data center." This was a bounded multi-state search; access constraints prevented a nationwide scrape. Deduplication used the prior 50-site and 20-opportunity files available in this session, not an assumed complete historical database.

For most leads the actual serving utility, local decision maker, carrier capacity, owner title, environmental constraints and net pad remain unresolved. The workbook labels gaps rather than inventing contacts or parcel numbers. Hold-tier properties are conditional backups, not recommendations to buy an option.

One useful learning reference

OG&E site-selection advisory services separates site-location support from rate/capacity planning. Ask: Who owns the parcel-specific delivery answer? What capital is required before a study? What evidence can a developer rely on or take over?

Next update: record the first broker responses, then spend research time on whichever site clears identity, availability and utility access. No website, automation, contract or external outreach was changed by this report.
